

HYDRAULIC MOTORS EPRM

APPLICATION

- » Conveyors;
- » Feeding mechanism of robots and manipulators;
- » Metal working machines;
- » Textile machines;
- » Machines for agriculture;
- » Food industries;
- » Grass cutting machinery etc.

CONTENTS

Specification data	30÷33
Function diagrams	34÷38
Permissible shaft Seal Pressure ...	38
Dimensions and mounting	39
Wheel motor	40
Shaft versions	26
Permissible shaft loads	27
Order code	41

OPTIONS

- » Model- Spool valve, geroler;
- » Flange and wheel mount;
- » Motor with needle bearing;
- » Side and rear ports;
- » Shafts- straight, splined and tapered;
- » Shaft seal for high and low pressure;
- » Metric and BSPP ports;
- » Other special features.

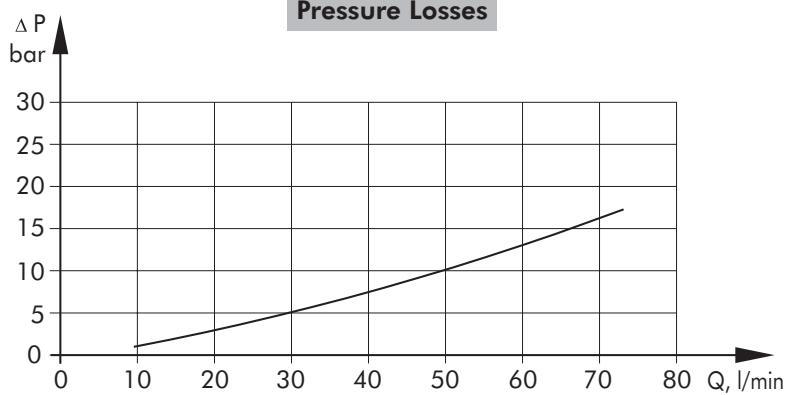

GENERAL

Displacement,	[cm ³ /rev.]	51,5÷397
Max. Speed,	[RPM]	775÷150
Max. Torque,	[daNm]	10,1÷61
Max. Output,	[kW]	5÷13
Max. Pressure Drop,	[bar]	175÷70
Max. Oil Flow,	[l/min]	40÷60
Min. Speed,	[RPM]	10
Pressure fluid		Mineral based- HLP(DIN 51524) or HM(ISO 6743/4)
Temperature range,	[°C]	-30÷90
Optimal Viscosity range, [mm ² /s]		20÷75
Filtration		ISO code 20/16 (Min. recommended fluid filtration of 25 micron)

Oil flow in drain line

Pressure drop (bar)	Viscosity (mm ² /s)	Oil flow in drain line (l/min)
100	20	2,5
	35	1,8
140	20	3,5

* Intermittent operation: the permissible values may occur for max. 10% of every minute.

** Peak load: the permissible values may occur for max. 1% for every minute.

*** For speeds of 10 RPM or lower, consult factory or your regional manager.

1. Intermittent speed and intermittent pressure drop must not occur simultaneously!
2. Recommended filtration is per ISO cleanliness code 20/16. A nominal filtration of 25 micron or better.
3. Recommended using a premium quality, anti-wear type mineral based hydraulic oil HLP(DIN51524) or HM (ISO 6743/4). If using synthetic fluids consult the factory for alternative seal materials.
4. Recommended minimum oil viscosity 13 mm²/s at operating temperatures.
5. Recommended maximum system operating temperature - 82°C.
6. To assure optimum motor life fill with fluid prior to loading and run at moderate load and speed for 10-15 min.

SPECIFICATION DATA for EPRM...LSV

Low Speed Valve (LSV) "LSV" Series hydraulic motors have been designed to operate with normal pressure drop and to ensure smooth run at low speed (up to 200 RPM), as the best security for operation is guaranteed at frequency of rotation 20 ÷ 50 RPM . They have an increased starting pressure drop and are not recommended for using at pressure less than 40 bar.

Look at specification data for hydraulic motors standard version. The modification concerns only the following parameters: maximum speed , maximum output, maximum Oil flow and maximum starting pressure.

Type	EPRM 50	EPRM 80	EPRM 100	EPRM 125	EPRM 160	EPRM 200	EPRM 250	EPRM 315	EPRM 400

Max. Starting Pressure with unloaded Shaft, [bar]	20	20	20	20	15	15	15	12	12

SPECIFICATION DATA for EPRM...LL

Low Leakage (LL) "LL" Series hydraulic motors have been designed to operate at the whole standard range of working conditions (pressure drop and frequency of rotation) , but with considerable decreased volumetric losses in the drainage ports. Their main purpose is to operate as series-connected motors in hydraulic systems.

For this version is permissible decreasing of the maximal torque with up to 5% (at middle speed) and up to 10% (at high speed) in comparison to the standard versions of motors.

Look at specification data for hydraulic motors series EPRM standard version. The modification concerns only the parameters: maximum torque, maximum output, minimum starting torque.

Type	EPRM 50	EPRM 80	EPRM 100	EPRM 125	EPRM 160	EPRM 200	EPRM 250	EPRM 315	EPRM 400

SPECIFICATION DATA for EPRM...FR

Free Running version "FR" these are the hydraulic motors with reduced mechanical losses , for which at disengaged condition / unconnected with driving mechanism / the rotation of the shaft could be realized by means of small torque. This advantage is especially useful at operating with high frequencies of rotation /over than 300 min⁻¹/ and low pressure drop , which is inherent for types with displacements of up to 200 cm³. It is normal for these for the different condition of operation to have high torque , as well as high volume losses: the values of the volumetric efficiency are lower (up to 5 % for middle and up to 10% for high values of the pressure drop) , than these of the normal versions. That's why the recommended operating for "FR" version is for applications with pressure drop up to 100 bar.

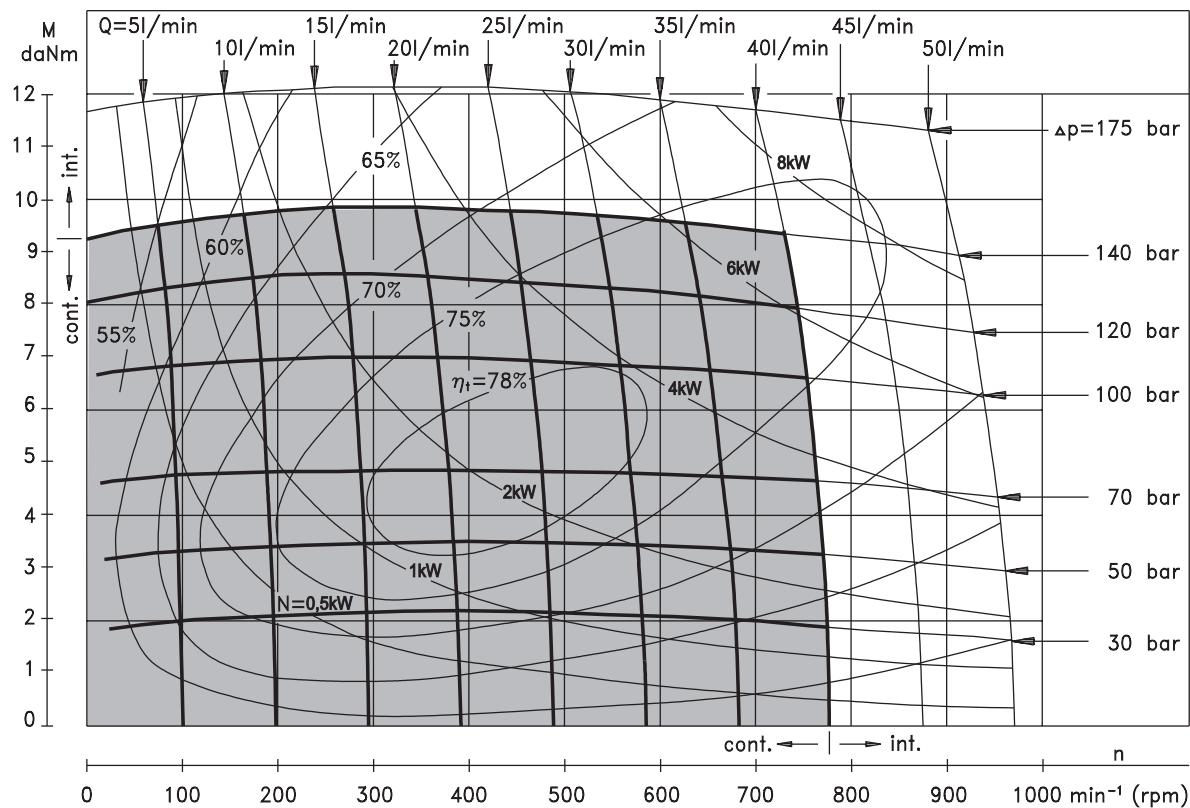

Additional advantages of "FR" version are prolonging of the life of the hydraulic motors at high frequencies of rotation, as well as the possibility to use them in systems with big variation of the loading.

Look at specification data for hydraulic motors series EPRM standard version. Only the parameter Starting Pressure is modified.
